# BARREN

## POWERFUL, LONG-LASTING HERBICIDE

### DESCRIPTION:

A powerful, non-selective herbicide designed for use where control of all vegetation is desired. It is also a soil sterilant, offering a total kill with long-lasting residue action, so it is only recommended for non-cropland areas away from residential/recreational areas.

### DIRECTIONS:

For best results, apply after predominate weeds have emerged and developed to the point where they present a problem. Apply product as is. No agitation or dilution is necessary. Any equipment from a sprinkling can to large sprayer may be used. Equipment should be calibrated to assure application of the recommended amount of weed killer. For annual weeds and grasses such as crab grass, foxtail, barnyard grass, lambs quarter and pigweed, apply 1-2 gallons per 1000 sq ft. For hard-to-kill perennial weeds such as smooth brome, quack grass, Canada blue grass, broom sedge, aster, dandelion, goldenrod, plantain, wild carrot and purple top, use 2-4 gallon per 1000 sq. ft. For other hard-to-kill perennial weeds and grasses such as Johnson grass, salt grass, Bermuda grass, horsetail bouncing bet and bracken fern, use 3-5 gal per 1000 sq. ft.

### NON-SELECTIVE HERBICIDE WITH RESIDUAL CONTROL:

Along Pipelines	Railroad Right-Of-Way	Fence Rows
Around Buildings	Loading Ramps	Storage Yards
Industrial Sites	Parking Lots	Tank Farms

### FEATURES AND BENEFITS:

- Long lasting residual action
- Recommended for use only on non-cropland area
- The degree of control and duration depends on the amount of herbicidal applied, soil type rainfall and other conditions

### SAFETY:

- Harmful or fatal if swallowed or absorbed through skin
- Causes eye and skin irritation
- Do not breathe mist or vapor

### FOR INDUSTRIAL AND INSTITUTIONAL USE ONLY
