

<<<TECHNICAL INFORMATION BULLETIN>>>

BIO-SNAKE

DESCRIPTION:

Bio Snake’s specially selected bacteria spores will vegetate (go from dormant to active) and degrade or digest the available waste when introduced into a water medium containing organic waste. These micro-organisms are capable of exponential growth. They can double in number every 20-30 minutes. The by-products of this bacteria activity are H2O and CO2.

Features & Benefits:

By adding strains of bacteria to organic waste, the following beneficial results can be achieved:

- Reduction of BOD (Biological Oxygen Demand) up to 80%
- Reduction of COD (Chemical Oxygen Demand)
- Reduction of SS (Suspended Solids)
- Foul odors of noxious gasses are reduced up to 80% by eliminating their source (organic waste)
- Save on labor and dumping fees

Bacterial concentrates are not genetically engineered or altered. They are naturally occurring found in the soil and water. They were carefully selected because they are:

- EPA and Health Department compliant
- Environmentally friendly
- Safe and stable
- Non-Pathogenic
- Non-Toxic
- Facultative reproductive every 30 minutes (capable of growth with or without oxygen)

DIRECTIONS:

Put nearest to the inflow in the bottom of the trap. Get this to the closest part. Repeat monthly. It works on sump pumps, lift stations, septic tanks, and grease traps. Break in half to flush down the toilet for septic tanks.

BIO-SNAKES / GALLONS:

1 for 25 gallons	2 for 100 gallons
3 for 250 gallons	4 for 500 gallons
5 for 750 gallons	6 for 1000 gallons

FOR INDUSTRIAL AND INSTITUTIONAL USE ONLY
